

MATH 300
INTRODUCTION TO MATHEMATICAL IDEAS
3 UNIT(S)

LOS RIOS/CRC
FALL 2018
SECTION # 14290

THIS SYLLABUS WAS UPDATED ON AUGUST 29, 2018

Instructor: Ivan Zaigralin

ZaigraI@crc.losrios.edu
melikamp@melikamp.com

Email is the primary and the most reliable way of contacting the instructor. Either address should work. When emailing, please always specify your real name (the same one as in the roster) and which class you are inquiring about. Emails omitting this information may fail to be processed.

Office: LRC 150, Monday 11:45 - 12:45 pm and 3:45 - 4:45 pm, Tuesday and Thursday 1:15 - 2:15 pm, Wednesday 3:45 - 4:45 pm, (916) 691-7086. Please let the instructor know if these hours do not work for you, and we can try to set up an appointment (allow 2 business days for reply).

Class Meetings: TueThu 5:30 - 6:50 pm, Science 215

Required Materials: *Mathematical Excursions*, 3rd edition, by Aufmann, Lockwood, Nation, Clegg. Online portion is not required, so you may be able to get the correct edition at a discounted price, if you buy used. The students are responsible for reading every section covered in class and/or assigned for homework.

Catalog Description: Introduction to Mathematical Ideas allows liberal arts students to meet general education mathematics requirements while exploring concepts and objects of mathematics in a meaningful way. This course is designed to show some of the essence and quality of mathematics, and to enhance precision in the evaluation and expression of ideas, thereby developing a student's quantitative reasoning skills. It is recommended primarily for students who do not plan to major in a math-related field, but may be of interest to others as well. Course content may include topics from numeration systems, logic, geometry, probability, statistics, algebraic modeling, number theory, consumer mathematics, graph theory, voting and apportionment, and perhaps others; concepts of contemporary mathematics may be covered. Emphasis is placed on the deductive process.

Prerequisites: MATH 120 or 125 with a grade of "C" or better; or equivalent skills demonstrated through the assessment process.

Methods of Instruction: Class meetings will feature a mix of lecture, discussion, short quizzes, and group assignments. Several in-class tests will be given.

Attendance: To succeed in this course, it is crucial that you come to class every day, alert and prepared to learn. Roll will be taken at the beginning of each class session. If you arrive after the class has started, please enter the room quietly and get on the roster at the end of the class. **If you miss more than a half of a class session for any reason, you will be considered absent for that whole day. If you miss the total of 6% of instruction any time during the semester, you may be dropped from the class.** These absences need not to be consecutive, and any class time you miss will be added to the total. Exceptions to this policy will be made **at the instructor's discretion** for documented cases of grave illness and/or family emergency.

If you miss the first class meeting without notifying the instructor or the division administrator in advance, you will be dropped from the class.

<https://www.crc.losrios.edu/catalog/geninfo/regulations>

Written Assignments: All written assignments, including but not limited to the homework, tests, quizzes, and the final, should be done in **dark pencil or pen; black, dark gray, dark blue, and deep purple** are preferred. Fancy colors such as **green, red, or pink** can only be used to augment graphs and illustrations.

Homework: Homework serves as practice and will prepare you to do your best on quizzes and tests. About 20% of the lowest homework grades will be dropped. Homework is crucial for learning the material as well as for succeeding in this class. Doing all homework is probably the most effective way to raise your test grades. You are welcome to work in groups while solving the homework, but you must submit your own work.

Homework in this class is not intended as the primary means of feedback. The students are expected to check and judge their own work by using answers, whenever the textbook provides them, and/or by discussing the homework with the instructor during the office hours. Typically, the instructor will only check a very small and somewhat random portion of the homework for accuracy.

Late homework will be accepted for 50% credit if it is less than 1 week late, and for 25% credit otherwise. Late homework will **not** be accepted during class meetings. The best way to submit the late homework is by bringing it to the instructor's office during the scheduled office hours.

Unless otherwise stated, all homework should be submitted on paper. The title page should list the homework name, your name, and your class. Solutions to exercises should be presented in the order they are assigned. Textbook sections must start a new sheet of paper.

what the homework should look like

HW 4 ← homework name

your name, class → Simpson, Lisa, Math 100

(7.5) ← textbook chapter, section

15. $1 + 2 = 3$
17. $(2x^2)' = 4x$

page ends here

new sheet starts

(7.6) ← next textbook section starts a new sheet of paper

1. $(x + 1)^2 = x^2 + 2x + 1$
2. $(-0.5x^{-2}y^{-1})^{-3} = -8x^6y^3$
⋮
-

Quizzes: Short quizzes will be given during some class sessions, typically without any advance warning. **No make-up quizzes will be given for any reason.** 20% or so of the lowest quiz scores will be dropped.

Tests: There will be several tests. **No make-up tests will be given for any reason.** If you are not present for the test, zero will be entered as your grade for that test. If you miss a test due to a documented case of grave illness and/or family emergency, you will have an option to use your final exam grade to replace that zero, but only **at the instructor's discretion.**

Final: The 2 hour comprehensive final exam will be given on the date determined by the official final exam schedule:

<https://www.crc.losrios.edu/students/finals/>

The final date and time is determined by the College District before the semester starts. You must plan to be present at the final. If your schedule precludes you from being present at the final, you must inform the instructor in writing during the first two weeks of instruction. If you are not present at the final, "F" will be entered as your grade for the class.

Grading:

Grades versus %		Grade Breakdown	
A	90 – 100%	Tests	45%
B	80 – 89%	Homework	10%
C	70 – 79%	Quizzes	10%
D	60 – 69%	Final	35%
F	0 – 59%		

Extra Credit: Get some extra credit during the first 2 weeks of instruction:

- (1) visit the instructor's office hours.

(2) access your college webmail and follow the directions in the instructor's greeting message.

Getting Help: If you have a question or a concern not addressed in this syllabus, please contact your instructor via email (allow 2 business days for reply). Moreover, the campus provides some resources to help you study:
<https://www.crc.losrios.edu/services>

Tutoring: The CRC Tutoring Center provides academic support services to CRC students. The Center facilitates drop-in tutoring, study skills coaching, study groups, and more.
<https://www.crc.losrios.edu/services/tutoring>

Additional tutors are available at the Math Center, which helps students to develop confidence and proficiency in their math skills. You must enroll in a variable unit course in order to use the Math Center.
<https://www.crc.losrios.edu/services/mathctr>

Computers: The use of computers and tablets during regular class meetings is OK as long as they are used for class work and are completely silent. While taking quizzes, tests, and the final, only the approved non-networked calculators and/or computers running approved software will be allowed. If in doubt, you should consult with the instructor and get your devices pre-approved prior to the test date. **Using tablets or computers for anything but the current assignment in this class may result in you being removed from the classroom until the end of the session.**

Forbidden Tech: Spyphone/smartphone use is prohibited while the class is in session. In particular, they can never be used as calculators. Computerized watches can be used for showing current time only, and should be stowed away during tests. **Using the tech listed above in violation of this syllabus may result in you being removed from the classroom until the end of the session, which will count as an unexcused absence.**

Required Tech: A basic arithmetic calculator, also known as **4-function calculators**, with operations $+$ $-$ \times \div and $\sqrt{\quad}$. If your calculator has any advanced mathematical functions, consult the instructor and get it pre-approved.

Accommodations: Disability Support Programs & Services (DSP&S) provides equal educational opportunity for students with physical, psychological, or learning disabilities. Counseling, support services, and academic accommodations are provided to students who are eligible for the program.

The Cosumnes River College Learning Disabilities Program can provide support services and academic accommodations to students who have documentation of a specific learning disability from another school or professional. In addition, Diagnostic Assessment may be available for appropriately referred students who come to the DSP&S program for an orientation appointment.

If you have a learning disability, a physical disability, or other special needs, please let the instructor know as soon as possible if you need special accommodations.

Students have the right to request reasonable modifications to college requirements, services, facilities or programs if their documented disability imposes a functional educational limitation or impedes access to such requirements, services, facilities, or programs. A student with a disability who will be requesting modification, accommodation, or access to an auxiliary aid is required and responsible for identifying himself/herself to the instructor and, if desired, to the Disabled Students Programs and Services (DSP&S office). In either event, the student is responsible for providing appropriate documentation of his/her disability. Students who consult or request assistance from the DSP&S office regarding specific modifications, accommodations or use of auxiliary aid will be required to meet timelines and procedural requirements established by the DSP&S office.

<https://www.crc.losrios.edu/services/dsps>

Academic Honesty: Any instance of plagiarism and/or cheating will result in the score of zero for that homework, quiz, or test, and will be reported to the Vice President's office.
<https://www.crc.losrios.edu/catalog/geninfo/integrity>

Meta: The instructor reserves the right to make changes to this syllabus throughout the semester. All relevant changes will be announced in class, and an updated version of the syllabus will be published online. Students are responsible for keeping up with these changes.

Student Learning Outcomes: This section is here for reference only. It may be useful to consult as you are preparing for the final exam. Upon successful completion of this course, the student will be able to

- Categorize and analyze mathematical objects and apply them to real life problems
 - define and setup tables, diagrams, graphs, and matrices
- Solve mathematical problems from different branches of mathematics
 - manipulate and solve problems relating to algebra
 - apply basic geometric axioms, definitions, and theorems to solve geometric problems
 - recognize principles of counting techniques to determine number of ways to select members from a group for a specific task
 - compute mean, median, mode, range, standard deviation, and variance of a set of data
- Interpretations of mathematical objects in a variety of analytical settings and performing different operations to combine these objects
 - recognize different representations of sets and performing different set operations to combine sets
 - apply the logic properties to assess the validity of an argument
- Apply the mathematical concepts or objects to assess a situation , make decisions, and solve the real life problems
 - assess the risks and rewards of credit cards and investments, and select the optimal path for a delivery route
 - create an efficient schedule, select a fair method for dividing valuable assets, and evaluate the efficiency of an algorithm
- Defend some aspects of the mathematics used in real life applications
 - investigate and solve real life problems such as home mortgage loans and student loans
 - pursue the meaning of mathematics through the history of different numeration system and the progression of mathematics
